Software engineering
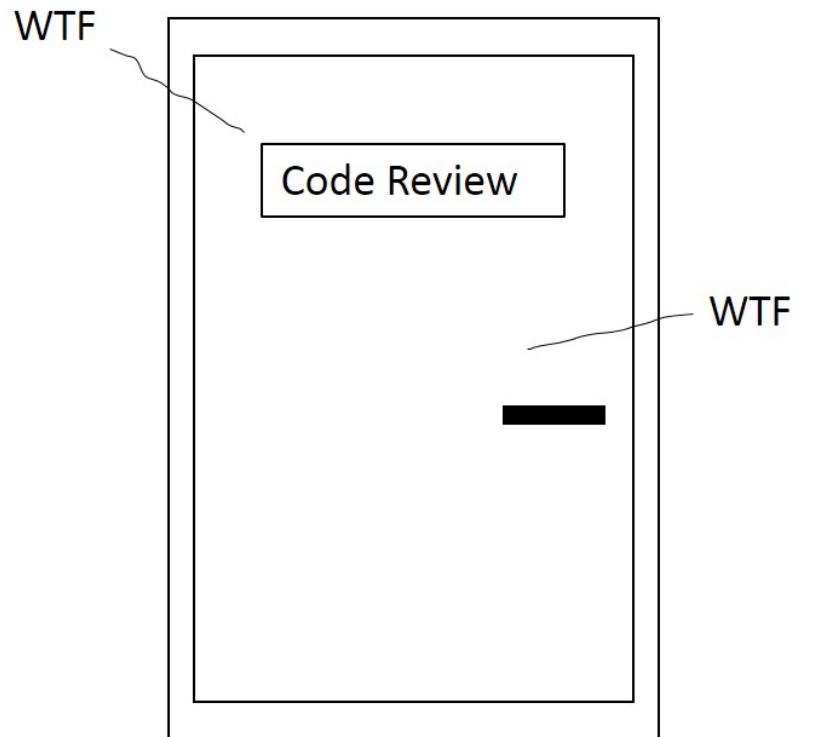

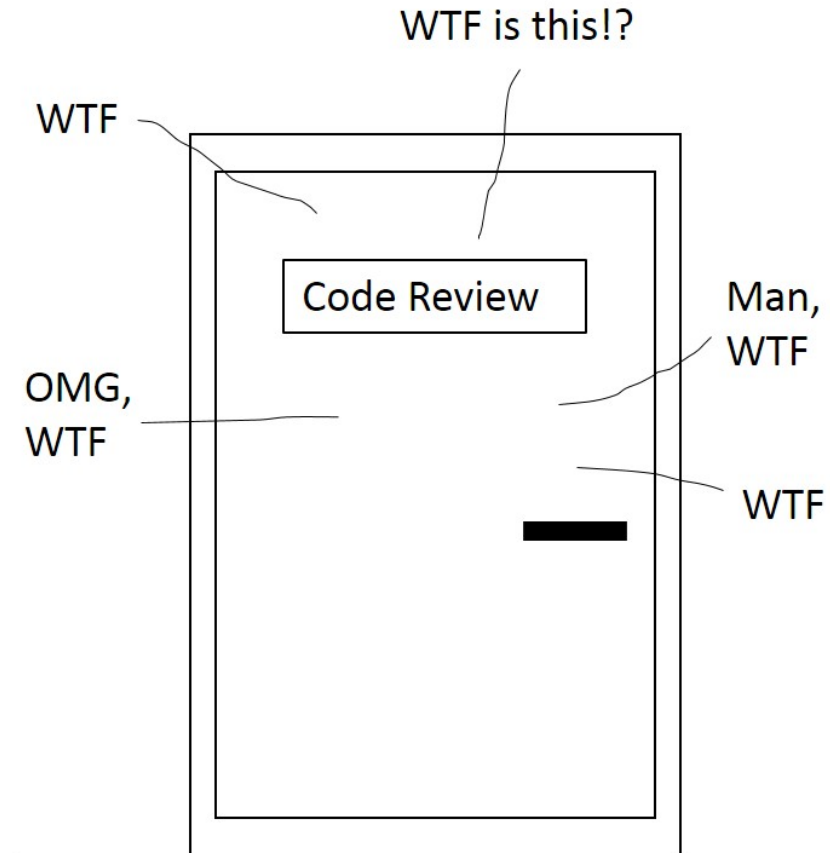

Working with other people's code and unit testing

The only valid measurement of code quality: WTFs/minute

Refactoring

Code smells

- It's difficult to understand what it does or why it does it
- You or people on your team avoid working with it
- It's slower to modify than other areas or tends to break when modified
- It's hard to test or debug
- Long method, large class, many parameters etc.

The art of unit testing

BEWARE OF DOG
CAT IS NOT TRUSTWORTHY EITHER
